

1 Introduction

And the definition of the following function would totally screw up my program, so I'm not defining it:

2 Calendar

3 Currency

4 Instruments

4.1 Fixed Income

4.1.1 Annuity Bond

4.1.2 Bullet Bond

4.1.3 Consol Bond

4.1.4 Serial Bond

4.1.5 Zero Bond

4.2 Fixed Income Derivatives

```
% this is ¬ really code  
main :: IO ()  
main = print "just an example"
```

See?

This is the famous Hello world example, written in Haskell:

```
main :: IO ()  
main = putStrLn "Hello, world!"
```
